## Experience

### Aptos Labs

January 2026 – May 2026

*Independent Engineer, In Residence (unpaid)*

Palo Alto, CA

- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing.
- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Built automated Decibel trading bots that convert **TradingView PineScript** indicators into onchain smart contract trading strategies.
- Wrote a prediction market Move contract from scratch, then partnered with Aptos founding engineers to profile transaction paths, storage access, and execution bottlenecks until benchmark throughput reached **10k TPS**.

### Ernst & Young, EY Blockchain

September 2024 – September 2025

*Blockchain Security Consultant*

San Francisco Bay Area

- Audited enterprise cryptocurrency custody infrastructure **alongside Trail of Bits**, reviewing transaction orchestration codebases, cold storage signing workflows, and HSM integrations.
- Led crypto incident response investigations in partnership with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.
- Authored stablecoin research on mechanism design, peg stability, regulatory frameworks, and protocol risk for EY Blockchain clients.
- Presented weekly technical research on **Aptos, Sui, Hyperliquid**, stablecoins, cross chain bridge risk, and emerging L1/L2 ecosystems.
- Developed cross chain expertise spanning EVM, Move, Aptos, Sui, and emerging platforms, directly informing audit methodology and client advisory.

### Ernst & Young

June 2021 – September 2021

*Forensic Data Analyst (Intern)*

San Francisco Bay Area

- Implemented anomaly detection for forensic data analysis, identifying cases of fraudulent financial activity.
- Researched and presented Ethereum and Celo protocols to EY Blockchain colleagues.
- Worked with Solidity, EVM, and DeFi protocols to create product research for clients.

### Sydereal

December 2020 – October 2021

*Software Engineering Intern (Part-Time, during school year)*

San Francisco Bay Area

- Migrated satellite telemetry from SQLite to InfluxDB, increasing data processing speeds by 20%.
- Implemented neural network anomaly detection for spacecraft telemetry, saving about \$150K.

### Proximai AI

May 2020 – June 2021

*AI Research Intern (Part-Time, during school year)*

San Francisco Bay Area

- Prepared three advanced technology proposals to NASA Innovative Advanced Concepts.
- Contributed to RaDAR, a spatial temporal framework for military aircraft GO/NO GO decisions.

## Projects

### Whop Finance: Agent Banking on Aptos | [whop.finance](https://whop.finance)

- Built an AI agent banking demo with **Whop integration** — autonomous agents open accounts to send, save, swap, and borrow on Aptos — spanning **100 Next.js API routes** and five workspace packages (SDK, CLI, **x402 payments**, Tether WDK wallet).
- Implemented savings and credit on **Aave V3**, DEX aggregation via **Panora**, and **Tether WDK** creator payment flows across checking, savings, credit, and exchange accounts.

### Content Rewards, Onchain | [propwhop.com](https://propwhop.com)

- Built a fully automated pay-per-view rewards system for content clippers — submit a YouTube URL and **USDT streams to the clipper's wallet as views accumulate**, no manual approval at any step.
- Move payment-streaming contracts on Aptos with a Next.js oracle verifying views via the **YouTube Data API** and storing evidence on **Shelby**; authored the PropWhop whitepaper the streaming design derives from.

### commits.sh: Live Developer & AI-Usage Telemetry | [commits.sh](https://commits.sh)

- Turns any GitHub account's activity into a calibrated dev rank and live velocity index, with a public REST API, **MCP server**, CLI, and embeddable live SVG badges.
- Streams real time token telemetry from **8 coding agents** (Claude Code, Codex, Cursor, and others) — **67B+ tokens tracked** with per-model cost, cache hit rate, and burn dashboards.

### Aptos Prediction Market | [aptos-polymarket.vercel.app](https://aptos-polymarket.vercel.app)

- Built a Polymarket style prediction market demo with Move contracts, market UI, real time trade streams, TPS dashboard, and HFT bot visualization.
- Partnered with Aptos engineers to optimize market creation, order resolution, and settlement flows to **10k TPS** for pitch demos.

## Education

### California Polytechnic State University, San Luis Obispo

September 2018 – June 2023

*B.S. Computer Science | 3.6 GPA | President, Cal Poly Blockchain*

## Volunteering

### Junior Achievement of Northern California

2016 – Present

*Classroom Volunteer*

SF East Bay & South Bay

- Volunteering with JA since high school; for the past three years taught the **JA crypto curriculum** across a dozen classroom sessions at Bay Area high schools, in **Circle's** scholarship partnership with JA.

## Technical Skills

**Languages:** TypeScript, Move, Rust, Solidity, Python

**Payments & Fintech:** Stripe, Tether WDK, x402 payments, Aave V3, Panora, creator payouts, Aptos TypeScript SDK, Move smart contracts

**Web, Data & Infra:** React, Next.js, Node.js, Vite, Redis, InfluxDB, SQLite, WebSockets, Tailwind CSS, Framer Motion, Vitest, Playwright, Vercel, GitHub Actions

**AI & LLMs:** OpenAI & Anthropic (Claude) APIs, LangChain, RAG, MCP, AI Agents & Function Calling, Prompt Engineering, Structured Outputs (Zod), Claude Code, Cursor
