Experience

Aptos Labs

January 2026 – May 2026

Independent Engineer, In Residence (unpaid)

Palo Alto, CA

- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing.
- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Built automated Decibel trading bots that convert **TradingView PineScript** indicators into onchain smart contract trading strategies.
- Wrote a prediction market Move contract from scratch, then partnered with Aptos founding engineers to profile transaction paths, storage access, and execution bottlenecks until benchmark throughput reached **10k TPS**.

Ernst & Young, EY Blockchain

September 2024 – September 2025

Blockchain Security Consultant

San Francisco Bay Area

- Audited enterprise cryptocurrency custody infrastructure **alongside Trail of Bits**, reviewing transaction orchestration codebases, cold storage signing workflows, and HSM integrations.
- Led crypto incident response investigations in partnership with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.
- Authored stablecoin research on mechanism design, peg stability, regulatory frameworks, and protocol risk for EY Blockchain clients.
- Presented weekly technical research on **Aptos, Sui, Hyperliquid**, stablecoins, cross chain bridge risk, and emerging L1/L2 ecosystems.
- Developed cross chain expertise spanning EVM, Move, Aptos, Sui, and emerging platforms, directly informing audit methodology and client advisory.

Ernst & Young

June 2021 – September 2021

Forensic Data Analyst (Intern)

San Francisco Bay Area

- Implemented anomaly detection for forensic data analysis, identifying cases of fraudulent financial activity.
- Researched and presented Ethereum and Celo protocols to EY Blockchain colleagues.
- Worked with Solidity, EVM, and DeFi protocols to create product research for clients.

Sydereal

December 2020 – October 2021

Software Engineering Intern (Part-Time, during school year)

San Francisco Bay Area

- Migrated satellite telemetry from SQLite to InfluxDB, increasing data processing speeds by 20%.
- Implemented neural network anomaly detection for spacecraft telemetry, saving about \$150K.

Proximai AI

May 2020 – June 2021

AI Research Intern (Part-Time, during school year)

San Francisco Bay Area

- Prepared three advanced technology proposals to NASA Innovative Advanced Concepts.
- Contributed to RaDAR, a spatial temporal framework for military aircraft GO/NO GO decisions.

Projects

Whop Finance: Agent Banking on Aptos | whop.finance

- Built an AI agent banking system with **Whop treasury integration** — autonomous agents send, save, swap, and borrow with sub-second finality and \$0.001 fees; **43 API routes** and three published npm packages (SDK, CLI, **x402 payments**).
- Implemented savings and credit on **Aave V3** (4–8% APY), DEX aggregation via **Panora**, and **Tether WDK** creator payment flows across checking, savings, credit, and exchange accounts.

Content Rewards, Onchain | propwhop.com

- Built an onchain take on Whop's Content Rewards on **Shelby** — creator reward pools that pay for content engagement — with MCP server workflows so agents can create and claim rewards.
- Authored and published the Content Rewards whitepaper covering payout mechanics, pool funding, and verification.

commits.sh: Live Developer & AI-Usage Telemetry | commits.sh

- Turns any GitHub account's activity into a calibrated dev rank and live velocity index, with a public REST API, **MCP server**, CLI, and embeddable live SVG badges.
- Streams real time token telemetry from **8 coding agents** (Claude Code, Codex, Cursor, and others) — **67B+ tokens tracked** with per-model cost, cache hit rate, and burn dashboards.

Aptos Prediction Market | aptos-polymarket.vercel.app

- Built a Polymarket style prediction market demo with Move contracts, market UI, real time trade streams, TPS dashboard, and HFT bot visualization.
- Partnered with Aptos engineers to optimize market creation, order resolution, and settlement flows to **10k TPS** for pitch demos.

Education

California Polytechnic State University, San Luis Obispo

September 2018 – June 2023

B.S. Computer Science | 3.6 GPA | President, Cal Poly Blockchain

Volunteering

Junior Achievement of Northern California

2016 – Present

Classroom Volunteer

SF East Bay & South Bay

- Volunteering with JA since high school; for the past three years taught the **JA crypto curriculum** across a dozen classroom sessions at Bay Area high schools, in **Circle's** scholarship partnership with JA.

Technical Skills

Languages: TypeScript, Move, Rust, Solidity, Python

Payments & Fintech: Stripe, Tether WDK, x402 payments, Aave V3, Panora, creator payouts, Aptos TypeScript SDK, Move smart contracts

Web, Data & Infra: React, Next.js, Node.js, Vite, Redis, InfluxDB, SQLite, WebSockets, Tailwind CSS, Framer Motion, Vitest, Playwright, Vercel, GitHub Actions

AI & LLMs: OpenAI & Anthropic (Claude) APIs, LangChain, RAG, MCP, AI Agents & Function Calling, Prompt Engineering, Structured Outputs (Zod), Claude Code, Cursor
