SUMMARY

Smart contract engineer building Aptos Move systems, LLM MCP servers, and onchain trading products. At Aptos Labs, shipped agent tooling and throughput focused demos for Decibel Trade, Shelby Protocol, Polymarket style prediction markets, and Whop style fintech workflows. Previously audited enterprise crypto custody infrastructure at EY Blockchain.

SKILLS

TypeScript	Move
Rust	Solidity
Python	Aptos TS SDK
viem	Foundry
MCP SDK	mcp-handler
LangChain	OpenAI SDK
Claude Code	ccusage
React / Next.js	Vite
Tailwind CSS	Framer Motion
Three.js	Zustand
Vitest	Playwright

VOLUNTEERING

Junior Achievement of Northern California
Classroom Volunteer | 2016 — Present
Taught the JA crypto curriculum (Circle partnership) across a dozen Bay Area high school sessions.

WORK EXPERIENCE

Aptos Labs

(January 2026 — May 2026)

Independent Engineer, In Residence (unpaid) — Palo Alto, CA

- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Built automated Decibel trading bots that convert **TradingView PineScript** indicators into onchain smart contract trading strategies.
- Wrote a prediction market Move contract from scratch, then partnered with Aptos founding engineers to profile transaction paths, storage access, and execution bottlenecks until benchmark throughput reached **10k TPS**.
- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing.

Ernst & Young, EY Blockchain

(September 2024 — September 2025)

Blockchain Security Consultant

- Audited enterprise cryptocurrency custody infrastructure **alongside Trail of Bits**, reviewing transaction orchestration codebases, cold storage signing workflows, and HSM integrations to identify attack vectors and security vulnerabilities.
- Led crypto incident response investigations in partnership with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.
- Authored stablecoin research on mechanism design, peg stability, regulatory frameworks, and protocol risk for EY Blockchain clients.
- Presented weekly technical research on **Aptos, Sui, Hyperliquid**, stablecoins, cross chain bridge risk, and emerging L1/L2 ecosystems.
- Developed cross chain expertise spanning EVM, Move, Aptos, Sui, and emerging platforms, directly informing audit methodology and client advisory.

Ernst & Young

(June 2021 — September 2021)

Forensic Data Analyst (Intern)

- Implemented anomaly detection for forensic data analysis, identifying cases of fraudulent financial activity.
- Researched and presented Ethereum and Celo protocols to EY Blockchain colleagues.
- Worked with Solidity, EVM, and DeFi protocols to create product research for clients.

Sydereal

(December 2020 — October 2021)

Software Engineering Intern (Part-Time, during school year)

- Migrated satellite telemetry from SQLite to InfluxDB, increasing data processing speeds by 20%.
- Implemented neural network anomaly detection for spacecraft telemetry, saving about \$150K.

Proximai AI

(May 2020 — June 2021)

AI Research Intern (Part-Time, during school year)

- Prepared three advanced technology proposals to NASA Innovative Advanced Concepts.
- Contributed to RaDAR, a spatial temporal framework for military aircraft GO/NO GO decisions.

PROJECTS

commits.sh: Live Developer & AI-Usage Telemetry

<https://commits.sh>

- Turns any GitHub account's activity into a calibrated dev rank and live velocity index, with a public REST API, **MCP server**, CLI, and embeddable live SVG badges.
- Streams real time token telemetry from **8 coding agents** (Claude Code, Codex, Cursor, and others) — **67B+ tokens tracked** with per model cost, cache hit rate, and burn dashboards.

Aptos Prediction Market: Polymarket Demo

<https://aptos-polymarket.vercel.app/>

- Built a Polymarket style prediction market demo with Move contracts, market UI, real time trade streams, TPS dashboard, and HFT bot visualization.
- Partnered with Aptos engineers to optimize market creation, order resolution, and settlement flows to **10k TPS** for pitch demos.

Whop Finance: Aptos Fintech Demo

<https://whop.finance/>

- Prototyped a Whop style Aptos finance demo with Tether WDK flows for creator payments, yield, cross chain transfers, and investing.
- Implemented agent banking flows across checking, savings, credit, exchange, and x402a payments using Aptos, Aave V3, Panora, and Whop integrations.

Sol2Move: Solidity to Aptos Move Transpiler

<https://github.com/SeamMoney/aptos-move-transpiler>

- Built a Solidity to Aptos Move v2 transpiler with Solidity analysis, inheritance flattening, OpenZeppelin pattern support, Move parsing, and validation.
- Transpiled **Veda BoringVault**, Uniswap V2/V3, Pendle, Trader Joe DLMM, and Compound v2; added differential fuzzing and a Sol2Move web app.

tx-composer: Aptos DeFi Transaction Composer

<https://github.com/SeamMoney/tx-composer>

- Designed simulate first Aptos DeFi transaction composition tooling with declarative Move call steps, return value wiring, balance tracking, and VM error diagnosis.
- Added JSON plan support so AI agents can generate, simulate, report, and execute atomic Aptos transactions before committing real funds.
