Projects

Whop Finance: Agent Banking on Aptos | whop.finance

- Built an AI agent banking demo with **Whop integration** — agents open accounts and send, save, swap, and borrow end-to-end on Aptos testnet through an SDK, CLI, and **x402 payment** packages.
- Implemented savings and credit on **Aave V3**, DEX aggregation via **Panora**, and **Tether WDK** payment flows across checking, savings, credit, and exchange accounts.

Content Rewards, Onchain | contentrewards.xyz

- Built **contentrewards.xyz** — live automated pay-per-view creator payouts, **payments powered by Whop**: brands fund campaigns at \$0.15–\$2.00 CPM, clippers submit YouTube/TikTok/Instagram clips, and **USDT streams to their Aptos wallets as views accumulate**, no manual approval.
- Move payment-streaming contracts, a Next.js oracle verifying views via the **YouTube Data API**, evidence on **Shelby**, and trust scoring for bot protection; authored the PropWhop whitepaper behind the streaming design.

Sol2Move: Solidity to Aptos Move Transpiler | github.com/SeamMoney/aptos-move-transpiler

- Built a Solidity to Aptos Move v2 transpiler with Solidity analysis, inheritance flattening, OpenZeppelin pattern support, Move parsing, and validation.
- Transpiled **Veda BoringVault**, Uniswap V2/V3, Pendle, Trader Joe DLMM, and Compound v2; added differential fuzzing and a Sol2Move web app.

tx-composer: Aptos DeFi Transaction Composer | github.com/SeamMoney/tx-composer

- Designed simulate-first transaction composition tooling — declarative Move call steps, return value wiring, balance tracking, and VM error diagnosis; JSON plans let AI agents simulate before committing real funds.

commits.sh: Live Developer & AI-Usage Telemetry | commits.sh

- Turns any GitHub account's activity into a calibrated dev rank and live velocity index — public REST API, **MCP server**, CLI, and embeddable live SVG badges.
- Streams real time token telemetry from **8 coding agents** — **67B+ tokens tracked** with per-model cost and burn dashboards.

Experience

Aptos Labs

January 2026 – May 2026

Independent Engineer, In Residence (unpaid)

Palo Alto, CA

- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing.
- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Wrote a prediction market Move contract from scratch, then profiled transaction paths, storage access, and execution bottlenecks with Aptos founding engineers until benchmark throughput reached **10k TPS**.

Ernst & Young, EY Blockchain

September 2024 – September 2025

Blockchain Security Consultant

San Francisco Bay Area

- Audited enterprise crypto custody infrastructure alongside **Trail of Bits** — transaction orchestration codebases, cold storage signing workflows, and HSM integrations.
- Led crypto incident response with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.

Ernst & Young

June 2021 – September 2021

Forensic Data Analyst (Intern)

San Francisco Bay Area

- Implemented anomaly detection for forensic data analysis, identifying cases of fraudulent financial activity; researched Ethereum and Celo protocols for client product research.

Sydereal

December 2020 – October 2021

Software Engineering Intern (Part-Time, during school year)

San Francisco Bay Area

- Migrated satellite telemetry from SQLite to InfluxDB (20% faster processing); implemented neural network anomaly detection for spacecraft telemetry, saving about \$150K.

Education

California Polytechnic State University, San Luis Obispo

September 2018 – June 2023

B.S. Computer Science | 3.6 GPA | President, Cal Poly Blockchain

Volunteering

Junior Achievement of Northern California

2016 – Present

Classroom Volunteer

SF East Bay & South Bay

- Volunteering with JA since high school; for the past three years taught the **JA crypto curriculum** across a dozen classroom sessions at Bay Area high schools, in **Circle's** scholarship partnership with JA.

Technical Skills

Languages: TypeScript, Move, Rust, Solidity, Python

Blockchain: Move smart contracts, Aptos TypeScript SDK, viem, Foundry, differential fuzzing, payment streaming

Payments & Fintech: Tether WDK, x402 payments, Aave V3, Panora, creator payouts, Aptos TypeScript SDK, Move smart contracts

Web, Data & Infra: React, Next.js, Node.js, Vite, Redis, InfluxDB, SQLite, WebSockets, Tailwind CSS, Framer Motion, Vitest, Playwright, Vercel, GitHub Actions
