Experience

Aptos Labs

January 2026 – May 2026

Independent Engineer, In Residence (unpaid)

Palo Alto, CA

- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Built automated Decibel trading bots that convert **TradingView PineScript** indicators into onchain smart contract trading strategies.
- Wrote a prediction market Move contract from scratch, then partnered with Aptos founding engineers to profile transaction paths, storage access, and execution bottlenecks until benchmark throughput reached **10k TPS**.
- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing.

Ernst & Young, EY Blockchain

September 2024 – September 2025

Blockchain Security Consultant

San Francisco Bay Area

- Audited enterprise cryptocurrency custody infrastructure **alongside Trail of Bits**, reviewing transaction orchestration codebases, cold storage signing workflows, and HSM integrations.
- Led crypto incident response investigations in partnership with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.
- Authored stablecoin research on mechanism design, peg stability, regulatory frameworks, and protocol risk for EY Blockchain clients.
- Presented weekly technical research on **Aptos, Sui, Hyperliquid**, stablecoins, cross chain bridge risk, and emerging L1/L2 ecosystems.
- Developed cross chain expertise spanning EVM, Move, Aptos, Sui, and emerging platforms, directly informing audit methodology and client advisory.

Ernst & Young

June 2021 – September 2021

Forensic Data Analyst (Intern)

San Francisco Bay Area

- Implemented anomaly detection for forensic data analysis, identifying cases of fraudulent financial activity.
- Researched and presented Ethereum and Celo protocols to EY Blockchain colleagues.
- Worked with Solidity, EVM, and DeFi protocols to create product research for clients.

Sydereal

December 2020 – October 2021

Software Engineering Intern (Part-Time, during school year)

San Francisco Bay Area

- Migrated satellite telemetry from SQLite to InfluxDB, increasing data processing speeds by 20%.
- Implemented neural network anomaly detection for spacecraft telemetry, saving about \$150K.

Proximai AI

May 2020 – June 2021

AI Research Intern (Part-Time, during school year)

San Francisco Bay Area

- Prepared three advanced technology proposals to NASA Innovative Advanced Concepts.
- Contributed to RaDAR, a spatial temporal framework for military aircraft GO/NO GO decisions.

Projects

commits.sh: Live Developer & AI-Usage Telemetry | commits.sh

- Turns any GitHub account's activity into a calibrated dev rank and live velocity index, with a public REST API, **MCP server**, CLI, and embeddable live SVG badges.
- Streams real time token telemetry from **8 coding agents** (Claude Code, Codex, Cursor, and others) — **67B+ tokens tracked** with per-model cost, cache hit rate, and burn dashboards.

Aptos Prediction Market | aptos-polymarket.vercel.app

- Built a Polymarket style prediction market demo with Move contracts, market UI, real time trade streams, TPS dashboard, and HFT bot visualization.
- Partnered with Aptos engineers to optimize market creation, order resolution, and settlement flows to **10k TPS** for pitch demos.

Whop Finance: Aptos Fintech Demo | whop.finance

- Prototyped a Whop style Aptos finance demo with Tether WDK flows for creator payments, yield, cross chain transfers, and investing.
- Implemented agent banking flows across checking, savings, credit, exchange, and x402a payments using Aptos, Aave V3, Panora, and Whop integrations.

Sol2Move: Solidity to Aptos Move Transpiler | github.com/SeamMoney/aptos-move-transpiler

- Built a Solidity to Aptos Move v2 transpiler with Solidity analysis, inheritance flattening, OpenZeppelin pattern support, Move parsing, and validation.
- Transpiled **Veda BoringVault**, Uniswap V2/V3, Pendle, Trader Joe DLMM, and Compound v2; added differential fuzzing and a Sol2Move web app.

tx-composer: Aptos DeFi Transaction Composer | github.com/SeamMoney/tx-composer

- Designed simulate-first Aptos DeFi transaction composition tooling with declarative Move call steps, return value wiring, balance tracking, and VM error diagnosis.
- Added JSON plan support so AI agents can generate, simulate, report, and execute atomic Aptos transactions before committing real funds.

Education

California Polytechnic State University, San Luis Obispo

September 2018 – June 2023

B.S. Computer Science | 3.6 GPA | President, Cal Poly Blockchain

Volunteering

Junior Achievement of Northern California

2016 – Present

Classroom Volunteer

SF East Bay & South Bay

- Volunteering with JA since high school; for the past three years taught the **JA crypto curriculum** across a dozen classroom sessions at Bay Area high schools, in **Circle's** scholarship partnership with JA.

Technical Skills

AI & Agents: MCP Servers (@modelcontextprotocol), Multi-Agent Orchestration, Claude Code Workflows, LLM Token Telemetry, LangChain, OpenAI API, AI Codegen Pipelines

Blockchain: Solidity, Move, Aptos Move, EVM Security, DeFi Audits, Foundry, Fuzzing, Aptos SDK, Trading Bots

Languages & Tools: TypeScript, Rust, Python, React / Next.js, Three.js, GraphQL, Tree-sitter, Playwright, Postgres
