SUMMARY

Smart contract engineer building Aptos Move systems, LLM MCP servers, and onchain trading products. At Aptos Labs, ships agent tooling and throughput focused demos for Decibel Trade, Shelby Protocol, Polymarket style prediction markets, and Whop style fintech workflows. Previously audited enterprise crypto custody infrastructure at EY Blockchain.

SKILLS

Solidity	Move
Aptos Move	MCP Servers
EVM Security	DeFi Audits
Foundry	Fuzzing
PineScript	Trading Bots
TypeScript	Rust
Aptos SDK	LayerZero
React / Next.js	Tailwind CSS
Three.js	Vite
GraphQL	Tree sitter
Playwright	Postgres

WORK EXPERIENCE

Aptos Labs

(September 2025 — Present)

Software Engineer, Palo Alto, CA

- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Built automated Decibel trading bots that convert **TradingView PineScript** indicators into onchain smart contract trading strategies.
- Built a prediction market Move contract from scratch and partnered with Aptos founding engineers to profile transaction paths, storage access, and execution bottlenecks until benchmark throughput reached **10k TPS**.
- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing; turned pitch feedback into working product flows rather than static mockups.

Ernst & Young, EY Blockchain

(August 2022 — September 2025)

Blockchain Security Consultant

- Audited enterprise cryptocurrency custody infrastructure **alongside Trail of Bits**, reviewing transaction orchestration codebases, cold storage signing workflows, and HSM integrations across distributed data centers to identify attack vectors and security vulnerabilities.
- Led crypto incident response investigations in partnership with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.
- Presented weekly technical research on **Aptos, Sui, Hyperliquid**, stablecoins, cross chain bridge risk, and emerging L1/L2 ecosystems.

Ernst & Young

(June 2021 — August 2021)

Forensic Data Analyst (Intern)

- Implemented anomaly detection for forensic financial analysis and researched Ethereum, Celo, Solidity, EVM, and DeFi protocols for client facing product research.

Sydereal

(2020 — 2021)

Software Engineering Intern

- Migrated satellite telemetry from SQLite to InfluxDB and built data workflows for aerospace monitoring systems.

Proximai AI

(2020 — 2021)

AI Research Intern

- Built neural network anomaly detection experiments and contributed to technical research for advanced aerospace AI proposals.

PROJECTS

Decibel / Shelby Agent Infrastructure

- Built LLM MCP servers for Decibel Trade and Shelby Protocol, giving agent clients structured access to protocol actions, data, and trading workflows.
- Built a PineScript to onchain bot pipeline that translates TradingView indicators into automated Decibel smart contract strategies.

Aptos Prediction Market: Polymarket Demo

<https://aptos-polymarket.vercel.app/>

- Built a Polymarket style Aptos demo and optimized a prediction market Move contract to **10k TPS** with Aptos founding engineer support.
- Designed throughput focused market creation, order resolution, and settlement flows for pitch conversations with the Polymarket team.

Whop Finance: Aptos Fintech Demo

<https://whop.finance/>

- Built a Whop style demo showing trading, payments, and investing on the Aptos stack; iterated from direct feedback with Whop's CEO.
- Packaged product flows for pitch discussions around how fintech companies could use Aptos for consumer finance products.

Sol2Move: Solidity to Aptos Move Transpiler

<https://github.com/SeamMoney/aptos-move-transpiler>

- Built a three stage compiler (Solidity AST → IR → Move AST → Move source) transpiling production DeFi contracts to idiomatic Aptos Move v2.
- Transpiled **Veda BoringVault**, Uniswap V2/V3, Pendle, Trader Joe DLMM, and Compound v2; added security heuristics and differential fuzzing.

Seam + tx composer: Aptos DeFi Infrastructure

<https://github.com/SeamMoney/seam-core>

- Built Aptos DeFi infrastructure and transaction composition tooling for routing Move calls, SDK flows, and protocol integrations.
- Used TypeScript, Aptos SDK, React, and Move to make protocol demos easier to test, inspect, and pitch from complete product surfaces.
