

Maxwell Mohammadi

(925) 876 1159 | maxwell.mohammadi@gmail.com | maxmohammadi.com | github.com/maxmoneycash | linkedin.com/in/maxwellmohammadi

Built two Whop-focused demos before applying: an onchain rebuild of **Content Rewards** — Whop's most popular app — on Shelby (contentrewards.xyz), and whop.finance agent banking.

Projects

Content Rewards, Onchain | contentrewards.xyz

- Rebuilt **Content Rewards** — the most popular app on **Whop's app store** — as an onchain demo on **Shelby Protocol**: brands fund campaigns at CPM rates, clippers submit YouTube/TikTok/Instagram clips, and **USDT streams to their Aptos wallets as verified views accumulate**.
- Fully automated by design — Move payment-streaming contracts, a Next.js oracle on the **YouTube Data API**, evidence on **Shelby**, trust scoring for bot protection; authored the PropWhop whitepaper behind the streaming design.

Whop Finance: Agent Banking on Aptos | whop.finance

- Built an AI agent banking demo with **Whop integration** — agents open accounts and send, save, swap, and borrow end-to-end on Aptos testnet through an SDK, CLI, and **x402 payment** packages.
- Implemented savings and credit on **Aave V3**, DEX aggregation via **Panora**, and **Tether WDK** payment flows across checking, savings, credit, and exchange accounts.

commits.sh: Live Developer & AI-Usage Telemetry | commits.sh

- Turns any GitHub account's activity into a calibrated dev rank and live velocity index — public REST API, **MCP server**, CLI, and embeddable live SVG badges.
- Streams real time token telemetry from **8 coding agents** — **67B+ tokens tracked** with per-model cost and burn dashboards.

Experience

Aptos Labs

January 2026 – May 2026

Independent Engineer, In Residence (unpaid)

Palo Alto, CA

- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing.
- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Wrote a prediction market Move contract from scratch, then profiled transaction paths, storage access, and execution bottlenecks with Aptos founding engineers until benchmark throughput reached **10k TPS**.

Ernst & Young, EY Blockchain

September 2024 – September 2025

Blockchain Security Consultant

San Francisco Bay Area

- Audited enterprise crypto custody infrastructure alongside **Trail of Bits** — transaction orchestration codebases, cold storage signing workflows, and HSM integrations.
- Led crypto incident response with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.

Sydereal

December 2020 – October 2021

Software Engineering Intern (Part-Time, during school year)

San Francisco Bay Area

- Migrated satellite telemetry from SQLite to InfluxDB (20% faster processing); implemented neural network anomaly detection for spacecraft telemetry, saving about \$150K.

Education

California Polytechnic State University, San Luis Obispo

September 2018 – June 2023

B.S. Computer Science | 3.6 GPA | President, Cal Poly Blockchain

Volunteering

Junior Achievement of Northern California

2016 – Present

Classroom Volunteer

SF East Bay & South Bay

- Volunteering with JA since high school; for the past three years taught the **JA crypto curriculum** across a dozen classroom sessions at Bay Area high schools, in **Circle's** scholarship partnership with JA.

Technical Skills

Languages: TypeScript, Move, Rust, Solidity, Python

Payments & Fintech: Tether WDK, x402 payments, Aave V3, Panora, creator payouts, Aptos TypeScript SDK, Move smart contracts

Web, Data & Infra: React, Next.js, Node.js, Vite, Redis, InfluxDB, SQLite, WebSockets, Tailwind CSS, Framer Motion, Vitest, Playwright, Vercel, GitHub Actions

AI & LLMs: OpenAI & Anthropic (Claude) APIs, LangChain, RAG, MCP, AI Agents & Function Calling, Structured Outputs (Zod)
