EXPERIENCE

Aptos Labs

September 2025 – Present

Software Engineer

- Shipped LLM MCP servers for **Decibel Trade** and **Shelby Protocol**, exposing protocol workflows to agent driven tooling.
- Built automated Decibel trading bots that convert **TradingView PineScript** indicators into onchain smart contract trading strategies.
- Built a prediction market Move contract from scratch and partnered with Aptos founding engineers to profile transaction paths, storage access, and execution bottlenecks until benchmark throughput reached **10k TPS**.
- Built Polymarket and Whop demos to pitch Aptos rails for prediction markets, trading, payments, and investing; turned pitch feedback into working product flows rather than static mockups.

Ernst & Young, EY Blockchain

September 2024 – September 2025

Blockchain Security Consultant

San Francisco Bay Area

- Audited enterprise cryptocurrency custody infrastructure **alongside Trail of Bits**, reviewing transaction orchestration codebases, cold storage signing workflows, and HSM integrations across distributed data centers.
- Led crypto incident response investigations in partnership with **TRM Labs**, tracing onchain fund flows and performing forensic analysis of transaction anomalies.
- Authored stablecoin research on mechanism design, peg stability, regulatory frameworks, and protocol risk for EY Blockchain clients.
- Presented weekly technical research on **Aptos, Sui, Hyperliquid**, stablecoins, cross chain bridge risk, and emerging L1/L2 ecosystems.
- Key Achievement:** Developed cross chain expertise spanning EVM, Move, Aptos, Sui, and emerging platforms, directly informing audit methodology and client advisory.

Ernst & Young

June 2021 – September 2021

Forensic Data Analyst (Intern)

San Francisco Bay Area

- Implemented anomaly detection for forensic data analysis, identifying cases of fraudulent financial activity.
- Researched and presented Ethereum and Celo protocols to EY Blockchain colleagues.
- Key Achievement:** Worked with Solidity, EVM, and DeFi protocols to create product research for clients.

Sydereal

December 2020 – October 2021

Software Engineering Intern (Part-Time, during school year)

San Francisco Bay Area

- Migrated satellite telemetry from SQLite to InfluxDB, increasing data processing speeds by 20%.
- Key Achievement:** Implemented neural network anomaly detection for spacecraft telemetry, saving about \$150K.

Proximai AI

May 2020 – June 2021

AI Research Intern (Part-Time, during school year)

San Francisco Bay Area

- Prepared three advanced technology proposals to NASA Innovative Advanced Concepts.
- Key Achievement:** Contributed to RaDAR, a spatial temporal framework for military aircraft GO/NO GO decisions.

PROJECTS

Decibel / Shelby Agent Infrastructure | *MCP servers, Decibel SDK, Shelby*

- Built Decibrrr, a Decibel Trade automation app with custom onchain SDK paths, TWAP and market maker strategies, delegation based trading, live bot state, and wallet integration.
- Built Shelby content rewards and MCP server workflows so agents could interact with Aptos protocol actions, content rewards, and trading tools through structured commands.

Aptos Prediction Market | *aptos-polymarket.vercel.app*

- Built a Polymarket style prediction market demo with Move contracts, market UI, real time trade streams, TPS dashboard, and HFT bot visualization.
- Partnered with Aptos engineers to optimize market creation, order resolution, and settlement flows to **10k TPS** for pitch demos.

Whop Finance: Aptos Fintech Demo | *whop.finance*

- Built a Whop style Aptos finance demo with Tether WDK flows for creator payments, yield, cross chain transfers, and investing.
- Implemented agent banking flows across checking, savings, credit, exchange, and x402a payments using Aptos, Aave V3, Panora, and Whop integrations.

Sol2Move: Solidity to Aptos Move Transpiler | *github.com/SeamMoney/aptos-move-transpiler*

- Built a Solidity to Aptos Move v2 transpiler with Solidity analysis, inheritance flattening, OpenZeppelin pattern support, Move parsing, and validation.
- Transpiled **Veda BoringVault**, Uniswap V2/V3, Pendle, Trader Joe DLMM, and Compound v2; added differential fuzzing and a Sol2Move web app.

tx-composer: Aptos DeFi Transaction Composer | *github.com/SeamMoney/tx-composer*

- Built simulate first Aptos DeFi transaction composition tooling with declarative Move call steps, return value wiring, balance tracking, and VM error diagnosis.
- Added JSON plan support so AI agents can generate, simulate, report, and execute atomic Aptos transactions before committing real funds.

EDUCATION

California Polytechnic State University, San Luis Obispo

September 2018 – June 2023

B.S. Computer Science | 3.6 GPA | President, Cal Poly Blockchain

TECHNICAL SKILLS

Blockchain: Solidity, Move, Aptos Move, EVM Security, DeFi Audits, Foundry, Fuzzing, Aptos SDK, LayerZero

AI & Trading: MCP Servers, Trading Bots, PineScript

Languages & Tools: TypeScript, Rust, React / Next.js, Tailwind CSS, Three.js, Vite, GraphQL, Tree sitter, Playwright, Postgres
